

# Q2 and H1 2022 Results Presentation

2 August 2022

# Disclaimer

---

This presentation ("Presentation") has been prepared by OCI N.V. (the "Company"). By accessing and reading the Presentation you agree to be bound by the following limitations:

This Presentation does not constitute or form a part of, and should not be construed as, an offer for sale or subscription of or solicitation of any offer to purchase or subscribe for any securities in any jurisdiction, and neither this Presentation nor anything contained herein shall form the basis of, or be relied upon in connection with, or act as an inducement to enter into, any contract or commitment whatsoever.

This Presentation may not be distributed to the press or to any other persons, and may not be redistributed or passed on, directly or indirectly, to any person, or published, in whole or in part, by any medium or for any purpose. The unauthorized disclosure of this Presentation or any information contained in or relating to it or any failure to comply with the above restrictions may constitute a violation of applicable laws. At any time upon the request of the Company the recipient must return all copies of this Presentation promptly.

The information contained in this Presentation has not been independently verified and no representation or warranty, express or implied, is made as to, and no reliance should be placed on, the fairness, accuracy, completeness, reasonableness or correctness of the information or opinions contained herein. Neither the Company nor any of its holding companies, subsidiaries, associated undertakings, controlling persons, shareholders, respective directors, officers, employees, agents, partners or professional advisors shall have any liability whatsoever (in negligence or otherwise) for any direct, indirect or consequential loss howsoever arising from any use of this Presentation or otherwise arising in connection with this Presentation. The information contained in this Presentation is provided as at the date of this Presentation and is subject to change without notice and the Company expressly does not undertake and is not obliged to review, update or correct the information at any time or to advise any participant in any related financing of any information coming to the attention of the Company.

The information in this Presentation does not constitute investment, legal, accounting, regulatory, taxation or any other advice, and this Presentation does not take into account your investment objectives or legal, accounting, regulatory, taxation or financial situation or other needs. You are solely responsible for forming your own opinions and conclusions on such matters and for making your own independent assessment of the Presentation.

This Presentation does not purport to contain all information that may be required by any party to assess the Company and its subsidiaries and affiliates, its business, financial condition, results of operations and prospects for any purpose. This Presentation includes information the Company has prepared on the basis of publicly available information and sources believes to be reliable. The accuracy of such information has been relied upon by the Company, and has not been independently verified by the Company. Any recipient should conduct its own independent investigation and assessment as to the validity of the information contained in this Presentation, and the economic, financial, regulatory, legal, taxation and accounting implications of that information.

Statements made in this Presentation may include forward-looking statements. These statements may be identified by the fact that they use words such as "anticipate", "estimate", "should", "expect", "guidance", "project", "intend", "plan", "believe", and/or other words and terms of similar meaning in connection with, among other things, any discussion of results of operations, financial condition, liquidity, prospects, growth, strategies or developments in the industry in which the Company and its subsidiaries operate. Such statements are based on management's current intentions, expectations or beliefs and involve inherent risks, assumptions and uncertainties, including factors that could delay, divert or change any of them. Forward-looking statements contained in this Presentation regarding trends or current activities should not be taken as a representation that such trends or activities will continue in the future. Actual outcomes, results and other future events may differ materially from those expressed or implied by the statements contained herein. Such differences may adversely affect the outcome and financial effects of the plans and events described herein and may result from, among other things, changes in economic, business, competitive, technological, strategic or regulatory factors and other factors affecting the business and operations of the company. Neither the Company nor any of its affiliates is under any obligation, and each such entity expressly disclaims any such obligation, to update, revise or amend any forward-looking statements, whether as a result of new information, future events or otherwise. You should not place undue reliance on any such forward-looking statements, which speak only as of the date of this Presentation. The Company does not: (i) accept any liability in respect of any forward-looking statements; or (ii) undertake to review, correct or update any forward-looking statement whether as a result of new information, future events or otherwise. It should be noted that past performance is not a guide to future performance. Interim results are not necessarily indicative of full-year results.

Certain data included in the Presentation are "non-IFRS" measures. These non-IFRS measures may not be comparable to similarly titled financial measures presented by other entities, nor should they be construed as an alternative to other financial measures determined in accordance with International Financial Reporting Standards or any other generally accepted accounting principles. Although the Company believes these non-IFRS financial measures provide useful information to users in measuring the financial performance and condition of its business, users are cautioned not to place undue reliance on any non-IFRS financial measures and ratios included in this Presentation.

Each recipient should be aware that some of the information in this Presentation may constitute "inside information" for the purposes of any applicable legislation and each recipient should therefore take appropriate advice as to the use to which such information may lawfully be put.

The distribution of this Presentation in certain jurisdictions may be restricted by law. Persons into whose possession this Presentation comes are required to inform themselves about and to observe any such restrictions. No liability to any person is accepted by the Company, including in relation to the distribution of the Presentation in any jurisdiction.

## Second Quarter and First Half Highlights and Outlook

Adjusted EBITDA of \$1,290 million in Q2 2022 (+141%) and \$3.8 billion LTM. Net debt declined \$553 million to \$708 million as of 30 June 2022. **Trailing net debt / adjusted EBITDA was 0.2x as of 31 March 2022**

**Natural gas hedging strategy in the US:** OCI has locked in c.50% of its US gas requirement for the 2023 – 2029 period at a WAP of \$4.3 / mmBtu, giving - together with Fertiglobe's gas supply contracts - visibility on more than 90% of OCI's long-term gas requirement

Favourable farm economics and low global grain stocks, combined with high gas prices in Europe, provide support for nitrogen selling prices to remain above historical averages

**Capital returns:** OCI distributed cash to shareholders of €1.45 / share (\$320 million) in June and proposes €3.55 / share (c.\$765 million) to be paid in October, bringing the total cash return to shareholders in 2022 to **€5.0 / share (\$1.1 billion)**

OCI was included in the **MSCI World Index** and **STOXX 600 Index**, some of the world's leading global equity indices, in June 2022

# Safety First: Commitment to Zero Injuries

OCI is committed to providing a safe and healthy workplace for all employees and stakeholders by implementing the highest international safety standards to avoid any potential risks to people, communities, assets or the environment

Total TRIR (Total Recordable Injury Rate)<sup>1,2</sup>

## Target zero injuries at all facilities

- Goal to achieve leadership in safety and health standards by fostering culture of zero injuries at all production facilities
- 12-month rolling recordable incident rate at the end of June 2022 was 0.37 incidents per 200,000 manhours

# Q2 2022 Results

## Summary

### Own-produced sales volumes sold in Q2 '22 vs. Q2 '21:

- Nitrogen volumes up 2% compared to Q2 2021
- Methanol volumes declined 38% as BioMCN was shut down due to the high gas price environment in Europe

**Third party traded volumes +12% for Q2 '22 vs Q2 '21**

### Summary of Q2 2022 performance:

- Revenues +95% and Adjusted EBITDA +141% in Q2 2022 y-o-y
- Adjusted net income of \$528 million in Q2 2022, compared to a net income of \$125 million in Q2 2021
- OCI generated free cash flow of \$928 million during Q2 2022 and \$1.5 billion during H1 2022
- Net debt declined by \$553 million during Q2 to \$708 million as of 30 June 2022 after cash distributions to OCI and Fertigllobe shareholders (combined \$490 million), or net leverage of 0.2x based on an LTM EBITDA of \$3.8 billion
- OCI distributed cash to shareholders of €1.45 / share (\$320 million) in June and proposes €3.55 / share (c.\$765 million) to be paid in October, bringing the total cash return to shareholders in 2022 to €5.0 / share (\$1.1 billion)

## Key Financials<sup>1</sup> and KPIs

Total Product Volumes	3,961.5	4,034.3	(2%)	7,404.6	7,557.1	(2%)

(1) Unaudited.

(2) OCI presents certain financial measures when discussing OCI's performance, that are not measures of financial performance under IFRS. These non-IFRS measures of financial performance (also known as non-GAAP or alternative performance measures) are presented because management considers them important supplemental measures of OCI's performance and believes that similar measures are widely used in the industry in which OCI operates.

(3) Free cash flow is an APM that is calculated as cash from operations less maintenance capital expenditures less distributions to non-controlling interests plus dividends from equity accounted investees, and before growth capital expenditures and lease payments.

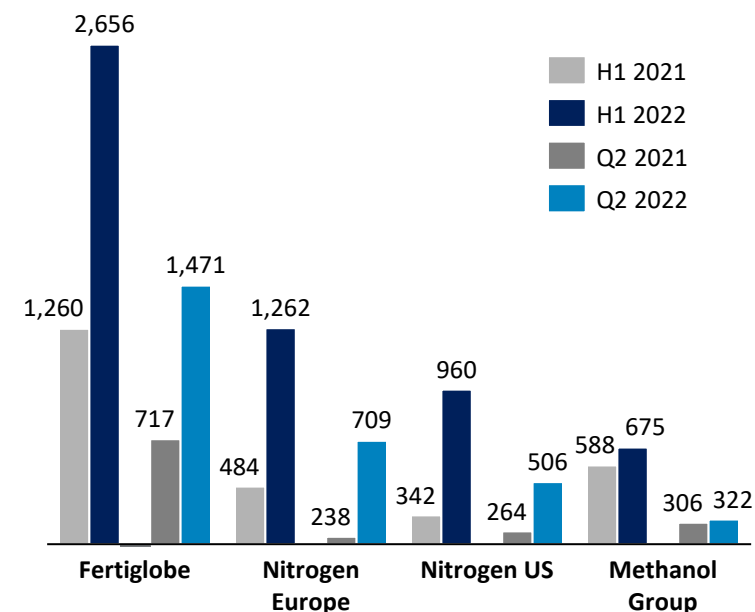

(4) Fully consolidated, not adjusted for OCI proportionate ownership stake in plants, except OCI's 50% share of Natgasoline volumes.

# Q2 2022 Revenue Up 95% and Adjusted EBITDA Up 141% YoY

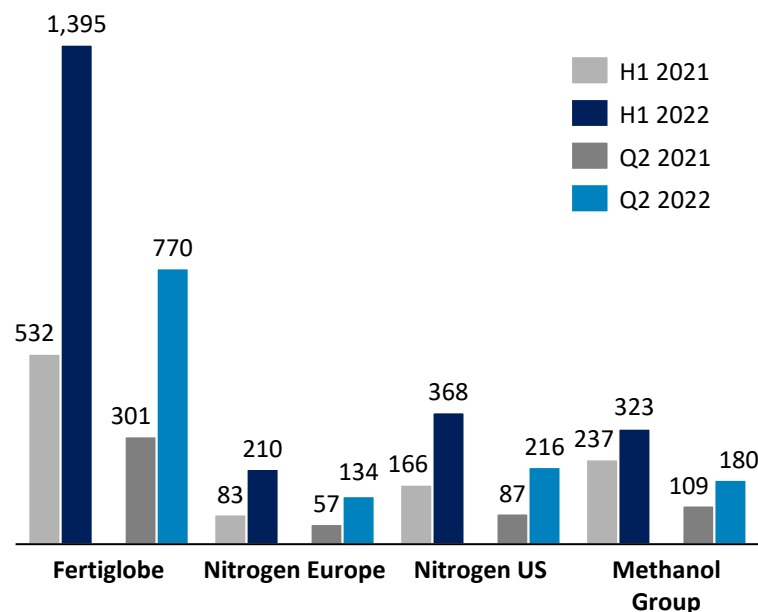

# Leading Position in Global Ammonia Markets and Flexible Business Model

Segment consolidated revenues (\$ m)

Segment consolidated adj EBITDA (\$ m)

OCI NV Gas Consumption by Region

% of total consumption in H1 2022

*Europe: 2 methanol lines and 1 ammonia line currently shut down, downstream production continues*

■ Fertiglobe  
■ US  
■ Europe

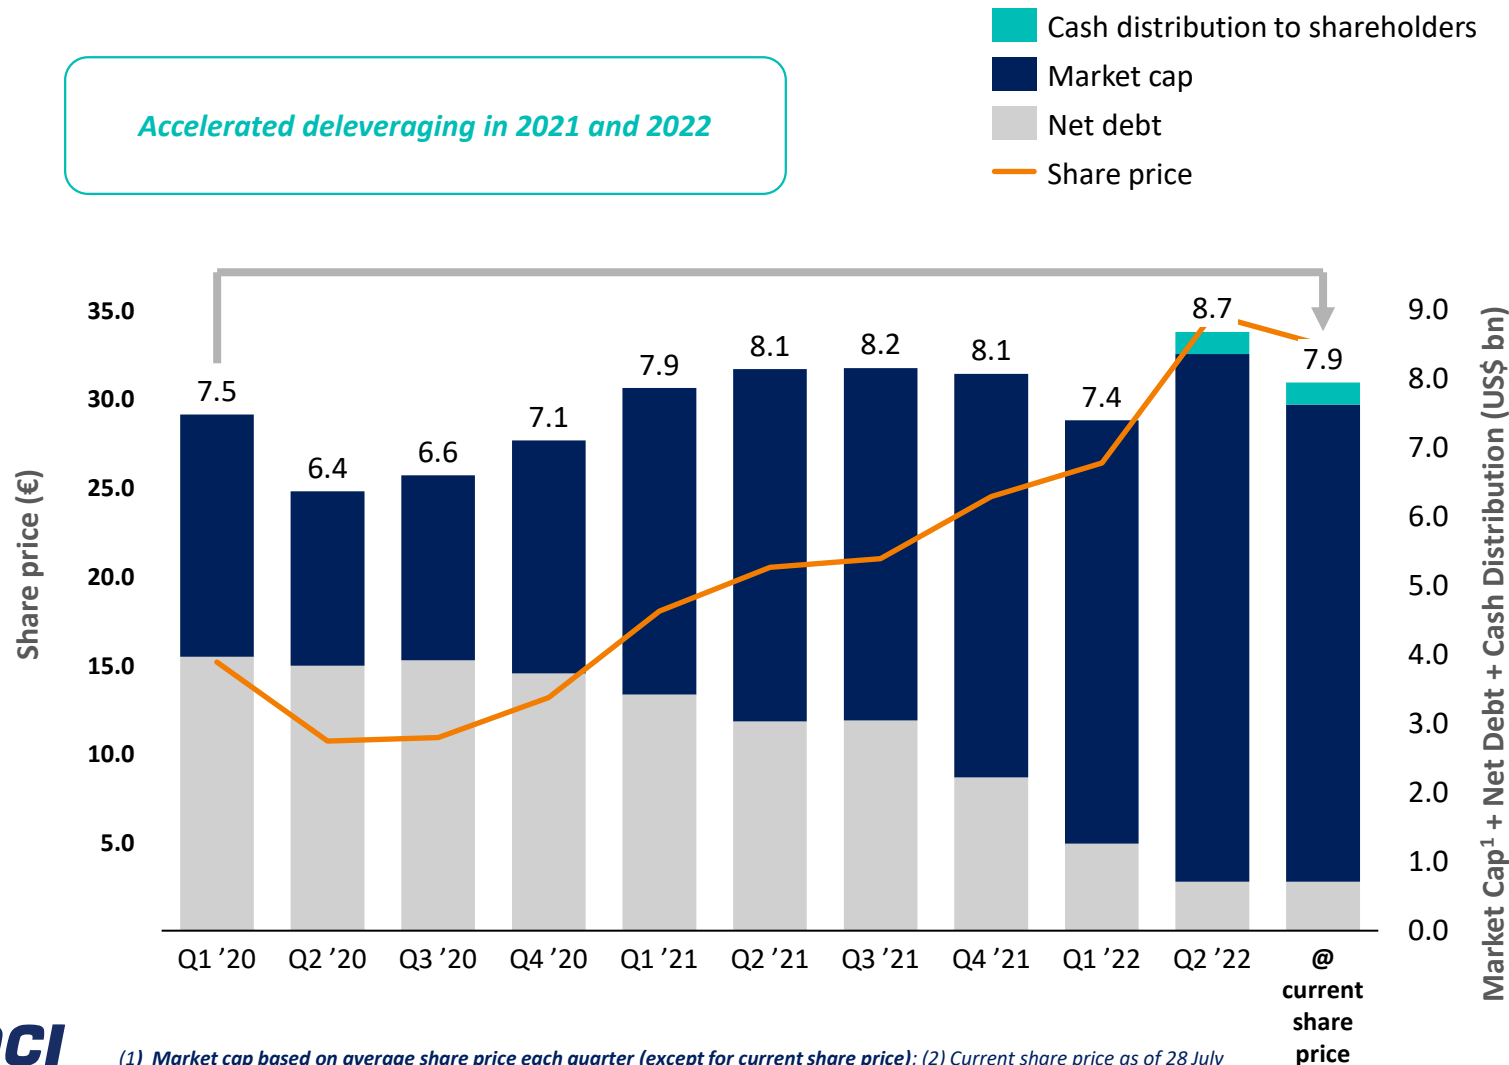

- OCI benefits from its leading position in global ammonia markets and flexibility to replace locally produced ammonia with imported ammonia shipped from Fertiglobe and the US
  - ✓ Ammonia capacity in Europe running at reduced rates due to curtailments and shutdowns, methanol production in Europe shut down, but OCI operates downstream production of nitrates and melamine profitably with support from our imported ammonia
  - ✓ Nitrogen Europe represents c.24% of consolidated revenues, but 9% of OCI's consolidated gas consumption in H1 2022
- Flexibility ensures that the company is able to satisfy the demand of our agricultural and industrial customers in key European markets
- OCI helps reduce Europe's dependence on natural gas by importing ammonia to maximise downstream production

# Market cap growth largely reflection of net debt reduction despite much improved outlook

De-risked balance sheet and positioned for growth

*Accelerated deleveraging in 2021 and 2022*

## Capital Allocation Priorities

Low net leverage combined with significantly improved market backdrop offers number of opportunities

- 1 Net debt has declined from \$4.0 billion in Q1 2020 to \$0.7 billion at end Q2 2022, offering:

- ✓ De-risked balance sheet
- ✓ Flexibility to **return capital** to shareholders
- ✓ Flexibility to **invest** in growth opportunities

- 2 Cash distributions to shareholders:

- ✓ **\$320 million in June 2022**
- ✓ Proposal **\$765 million cash distribution in October 2022**
- ✓ Implied **dividend yield c.15%**

# Capital Allocation Priorities

Committed to a consistent base distribution + a variable component based on surplus excess FCF<sup>1</sup>

## Strong balance sheet

Maintain as priority, target of <2x net leverage through the cycle

→ Supporting strong FCF and an investment grade profile

Balanced deployment of capital

### Capital returns to shareholders

Base distribution  
(paid semi-annually)

% of surplus FCF as special distribution or  
in the form of share buybacks

### Invest in growth

Invest in hydrogen / energy transition and  
other growth opportunities

To grow future FCF potential

Application of policy:

€1.45 per share paid in June 2022 and proposal €3.55 per share to be paid in October 2022

Balance availability of funds and excess FCF for dividend distribution while pursuing value accretive growth opportunities

- OCI's capital returns policy
  - ✓ Combines a consistent **base distribution** with a **variable component linked to FCF generated**
  - ✓ Semi-annual dividend distribution policy
- Base dividend:
  - ✓ \$400 million per annum
    - \$200 million payable twice a year
- All projects considered are subject to:
  - ✓ Our commitment to remain investment grade
  - ✓ Meeting our investment return thresholds
  - ✓ Our capital allocation policy to ensure consistent distributions to shareholders while pursuing growth opportunities

# Q2 2022 Free cash flow and Net Debt Build-up

## Reconciliation of Q2 2022 reported EBITDA to Free Cash Flow

# Nitrogen Outlook Supported by Attractive Supply-Demand Dynamics

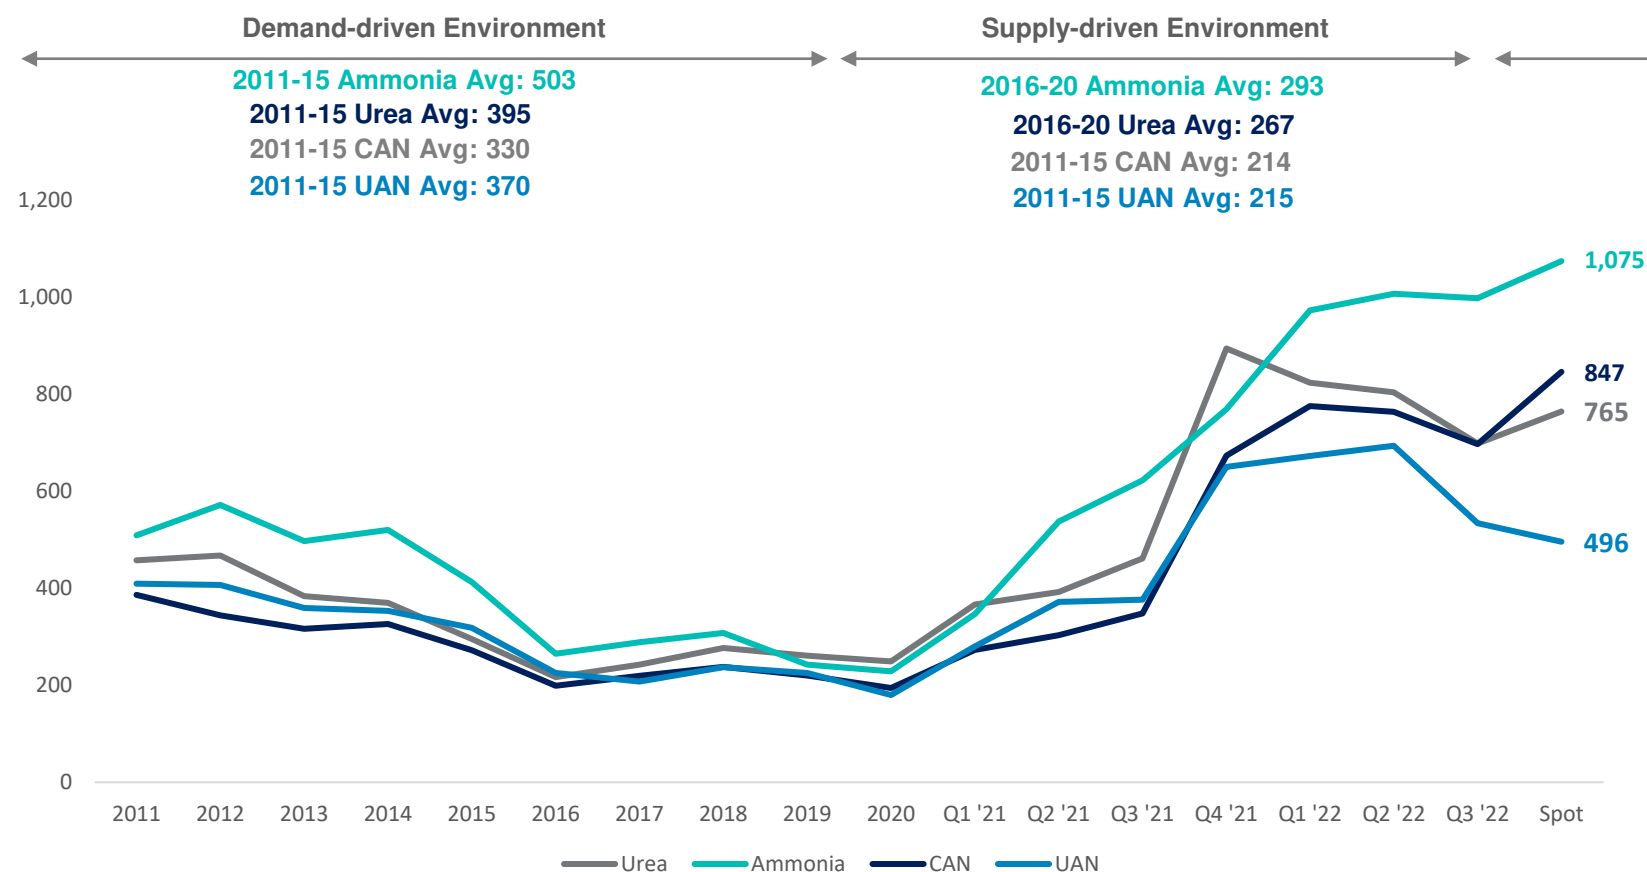

Supporting Strong Pricing Outlook For H2 2022 and Beyond as We Recover From a 5-year Downturn

Bull Market Drivers Support Demand Driven Environment		Prior cycle (last 5-6 years)	Next cycle (starting in 2022)
	<p><b>CROP PRICES SUPPORTIVE OF FARM ECONOMICS AND NITROGEN DEMAND</b></p> <p><i>Corn Futures &gt;\$5/bushel and Wheat Futures &gt;\$7/bushel supportive of affordability</i></p> <p><i>Grain stocks to use ratios at decade lows requiring at least until 2024 to replenish</i></p>	<p><b>30%</b> corn stocks-to-use ratio</p> <p><b>\$3.7/bushel</b> average corn price 2015 - 2019</p>	<p><b>26%</b> corn stocks-to-use ratio</p> <p><b>\$6.0/bushel</b> corn futures 2022 - 2024</p>
	<p><b>GAS AND COAL PRICES RESET AT HIGH LEVELS</b></p> <p><i>Low gas storage levels in Europe, limited Russian and LNG gas flows <b>raising marginal costs</b>, and therefore cost floors for ammonia, urea and nitrates</i></p>	<p><b>\$5/MMBtu</b> TTF (Dutch natural gas hub)</p>	<p><b>\$50/MMBtu</b> TTF to end of 2023<sup>1</sup></p>
	<p><b>TIGHTENING NITROGEN MARKET BALANCES</b></p> <p><i>New urea capacity is limited, faces delays and accelerating Chinese closures</i></p> <p><i>Structurally tighter merchant ammonia market with limited net capacity additions</i></p> <p><i>No new nitrates capacity additions tightening balances</i></p>	<p><b>23mt</b> new urea capacity vs. <b>17mt</b> demand growth over 2015 - 2019</p>	<p><b>11mt</b> new urea capacity vs. <b>16mt</b> demand growth over 2022 - 2026</p>
	<p><b>ENVIRONMENTAL FOCUS DRIVES SHIFT FROM GREY TO GREEN</b></p> <p><i>Stricter mandates around environment regulations are barriers to enter this industry</i></p> <p><i>Global push to move towards H<sub>2</sub> economy adds <b>incremental low-carbon ammonia demand</b></i></p>	<p>Wave of “grey” greenfield capacity additions in US, Europe, MENA</p>	<p>Limited new grey ammonia capacity from established producers and</p> <p><b>8mt</b> new ESG driven ammonia demand by 2025</p>

# Nitrogen Fertilizer Pricing Supported by Demand-Driven Environment

Strong support for nitrogen prices to reset above mid-cycle levels, given low global crop inventories, strong farm economics and higher marginal costs

Urea, Ammonia, CAN and UAN Prices (Monthly Averages, 2011 – Q3 2022<sup>1</sup>), \$/t

Sustained by:

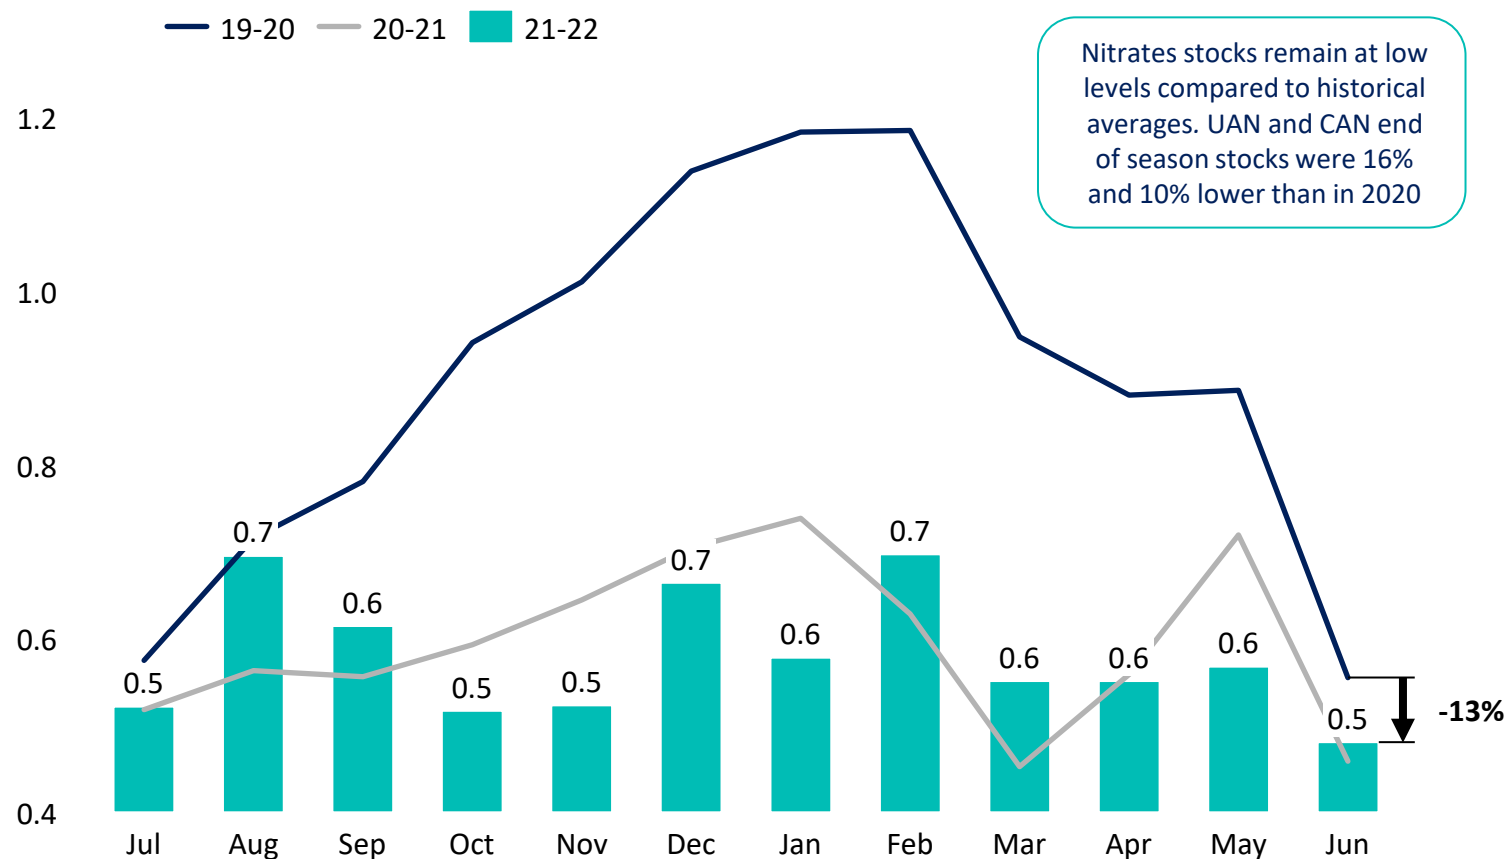

- 1 Stocks-to-use ratio at 10-year lows supportive of crop prices, higher planted acreage and demand at least until 2024
- 2 EU nitrogen production curtailments due to high gas prices and limited availability of feedstock supportive of pricing and higher differentials compared to the rest of the world
- 3 Delayed and lower level of new capacity along with accelerating capacity closures and lower exports from China **tightening nitrogen market balances**. Delays in Russian capacity and geopolitics also tightening fundamentals
- 4 Feedstock prices reset at high levels raising the marginal cost floors over medium-term
- 5 Environmental focus limits new grey greenfield capacity and creates **incremental demand for ammonia**

# Low European nitrates stocks

Healthy nitrates fundamentals and high marginal costs supportive

EU-14 AN, CAN and UAN stocks, Million Mt

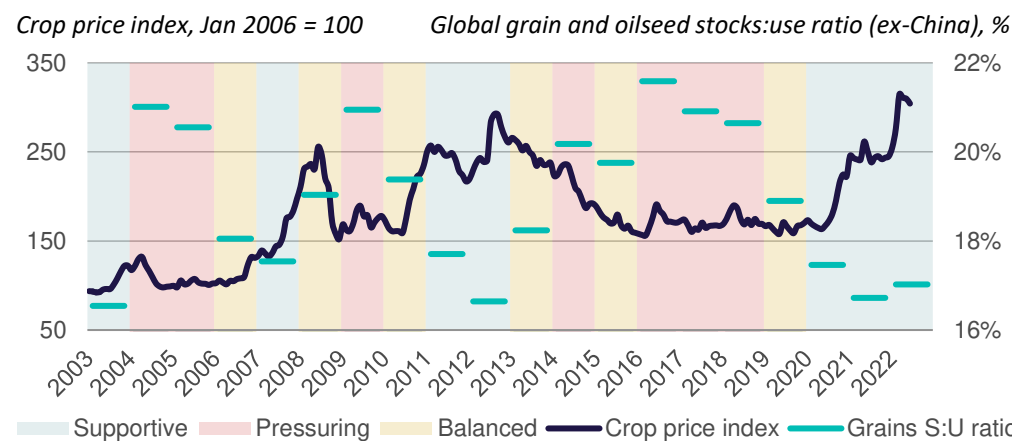

## New season outlook

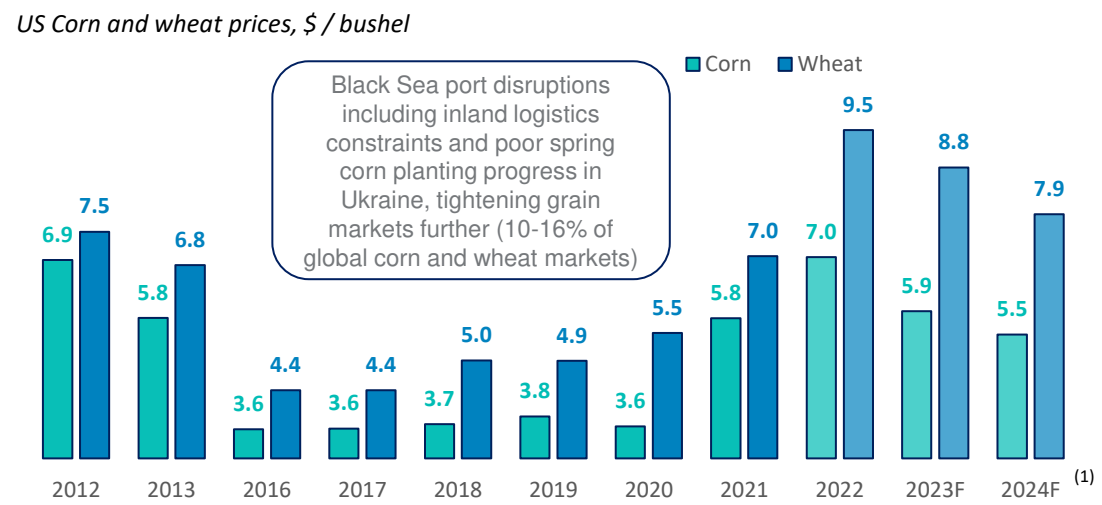

- ✓ Nitrates demand in Western Europe in the last season saw deliveries down only 5% against similar production declines, signalling strong farmer incomes and **supportive of demand in the next season. This is in line with our healthy order book**
- ✓ **Nitrates stocks at low levels compared to historical averages.** Limited stocks through the system supportive of demand
- ✓ Risk of some nitrates demand destruction due to limited availability given low stocks and EU production. Expect high nitrates premium to continue and increased switching into urea as farmers need the nitrogen
- ✓ July nitrates shutdowns amounted to c.5 million Mt of annualized capacity with shutdowns in **August estimated to reach at least 7 Mt of annualized capacity**
- ✓ **Further nitrates capacity out of a total of 34 Mt is at risk given the dual effect of high production costs, limited availability of natural gas in Europe** particularly in countries dependent on Russian gas (Germany, Italy, Austria and Poland) with no ammonia import capabilities.
- ✓ **Variable production costs of CAN based on gas >€750/t and on UAN > >€850/t supportive of pricing**

# Agricultural Fundamentals Supports Robust Nitrogen Demand at Least Until 2024

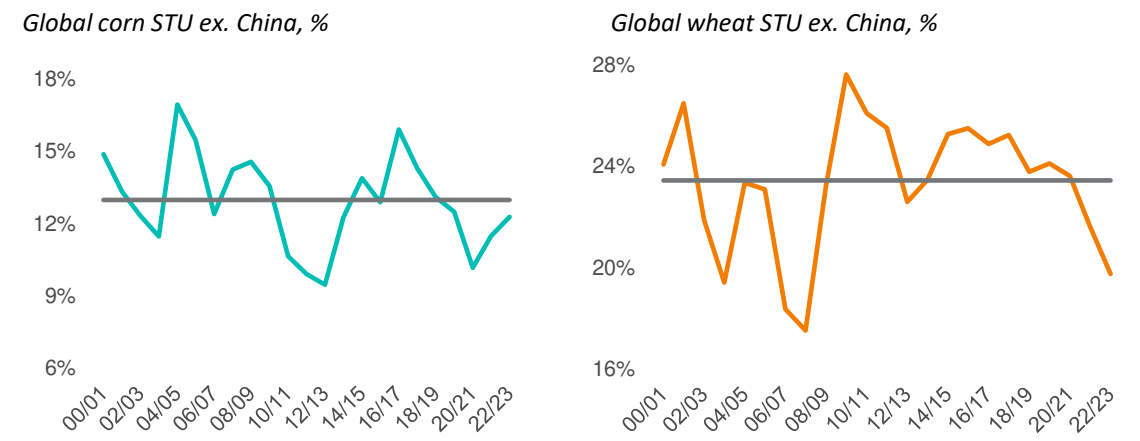

Crop prices supported by stocks : use ratio at 10 year lows, requiring at least until 2024 to replenish

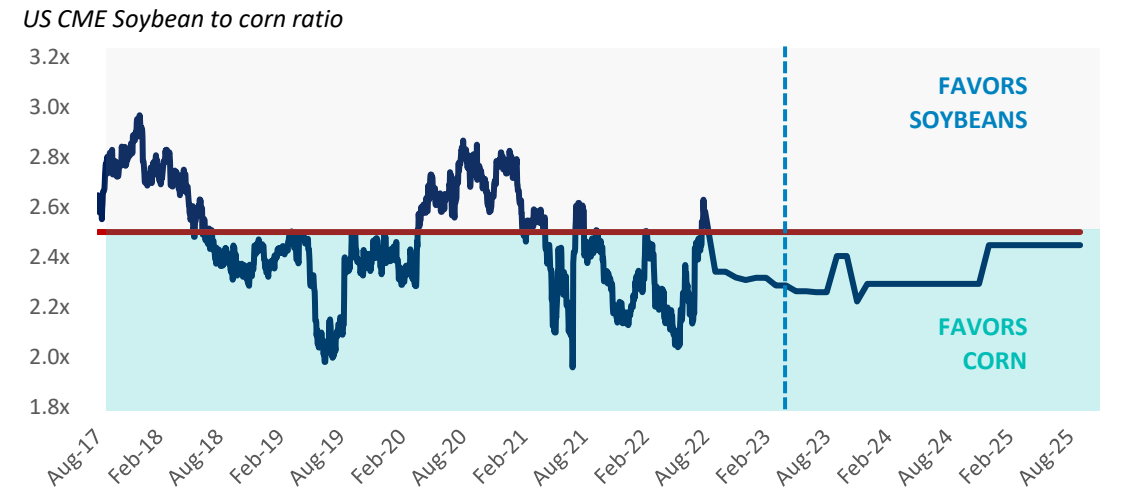

## Medium-term crop prices supported and incentive to plant corn

Tight grain stocks for corn and wheat at further risk given dry weather in the Northern Hemisphere and protectionist measures

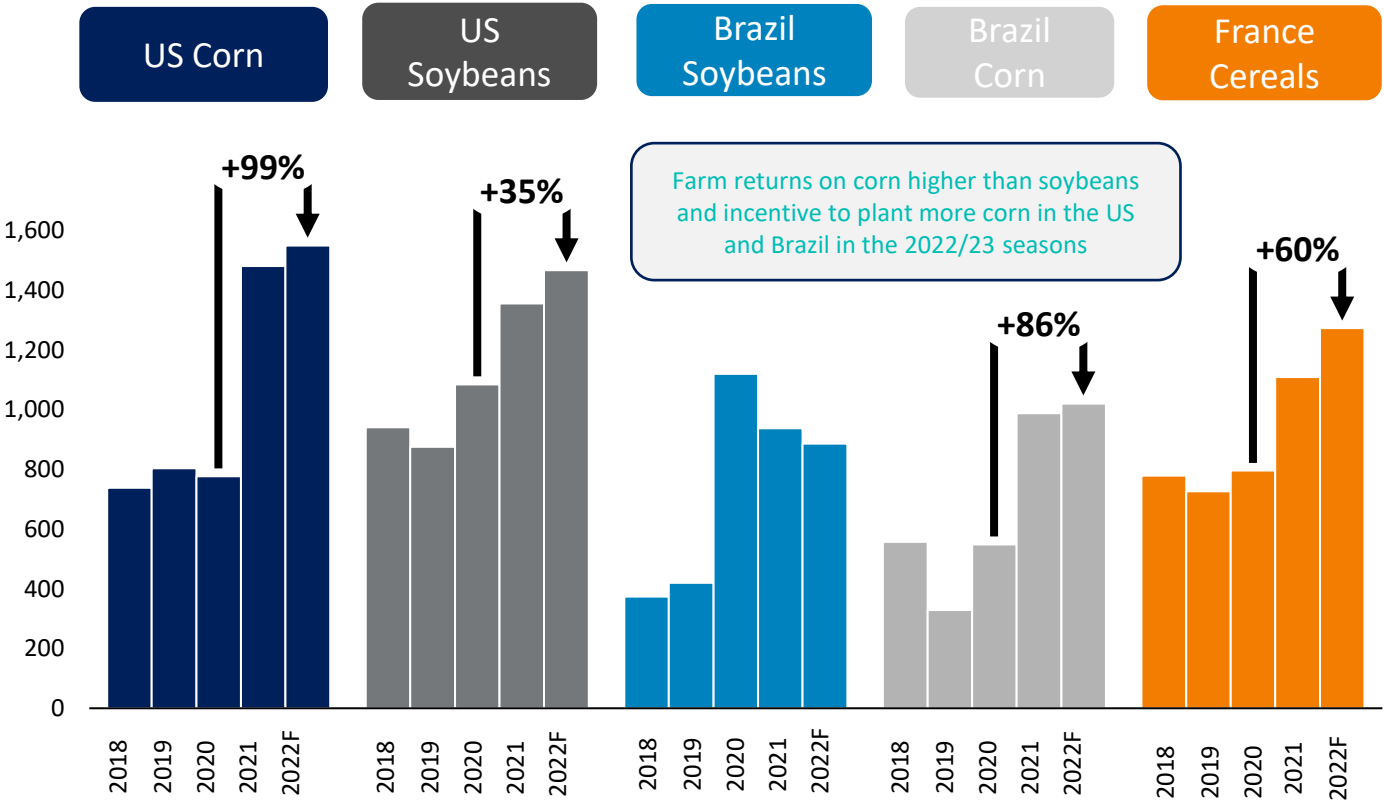

## US farmers incentivised to plant nitrogen intensive corn over soybeans

# High Farm Incomes Supportive Of Demand

Farm operating margins (revenue above operating costs), USD/ha

## 1 Supportive farm incomes in 22/23 :

Farm margins are attractive in grain exporting regions as input costs have been offset by higher crop prices, incentivising farmers to plant more acres across all crops. **High forward grain prices is supportive of sustaining farm incomes and strong demand until at least 2024.**

## 2 Inelastic nitrogen demand:

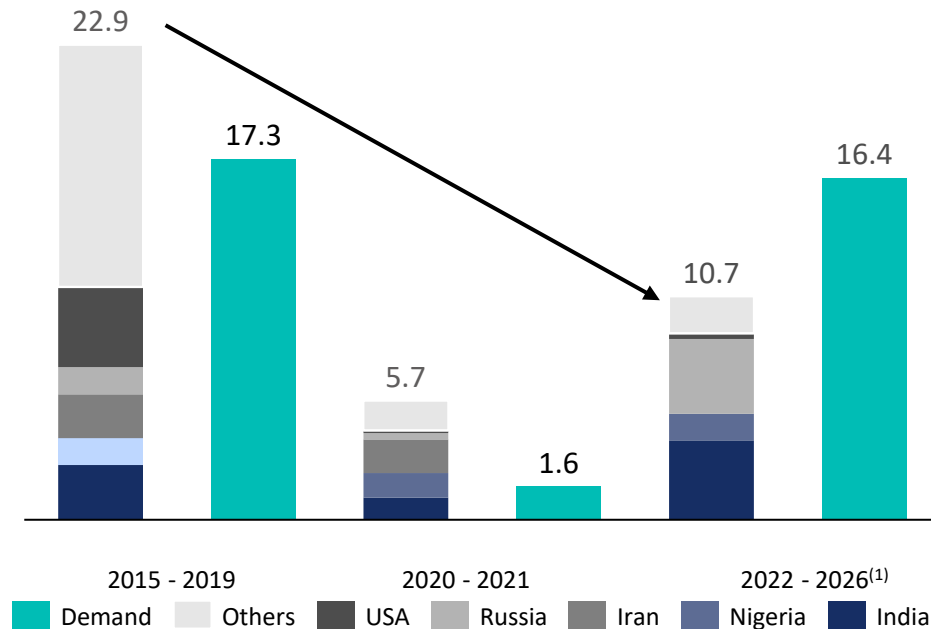

**Demand for nitrogen is inelastic compared to other fertilizers.** Farmers cannot cut nitrogen application by more than 10% without realising an immediate loss in yields as evidenced in the 21/22 season with limited demand destruction in grain exporting countries . Additional upside with switching to more nitrogen use in India

## 3 Farmers locking in input costs:

Farmers in US, Europe and Brazil are **hedging their operating margins, by selling forward their new crop at high forward grain pricing. At the same time, they are incentivised to purchase nitrogen and lock in margins.** This is supportive of nitrogen demand and pricing

# Attractive Nitrogen Dynamics With Demand Expected To Exceed Capacity Additions

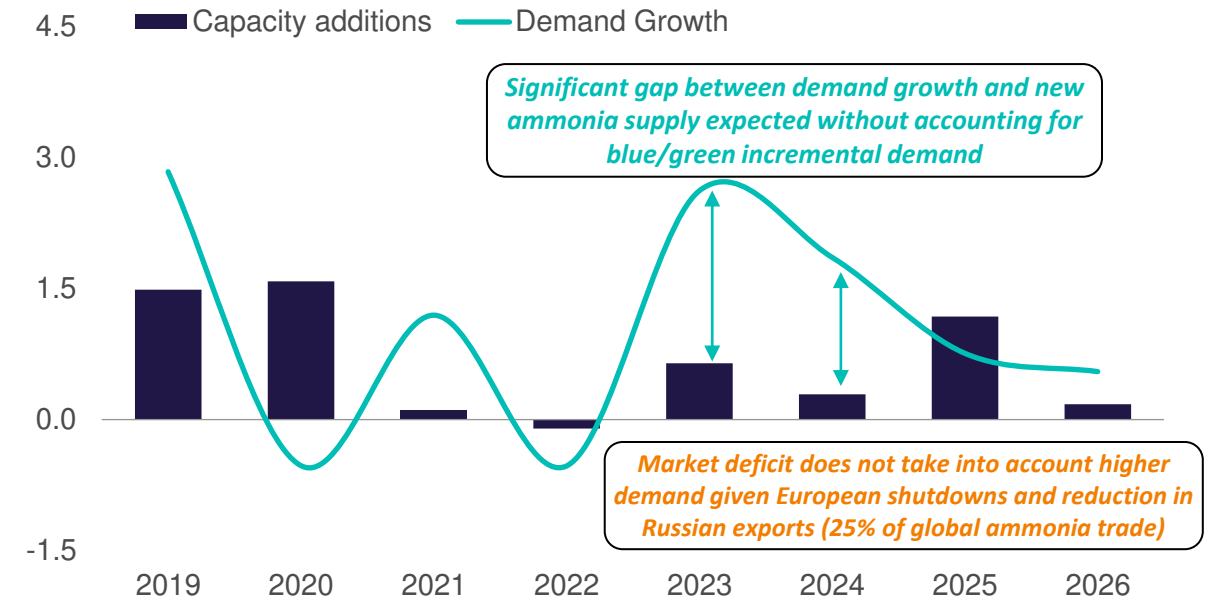

## Ex-China urea capacity additions slow relative to 2015-19, Mt

- ✓ Demand growth expected to exceed supply growth, new supply subject to delays and utilization rates expected to be slow to ramp up, limiting the impact on the traded market
- ✓ Significant reversal in market dynamics from over-supply in the last down cycle (2015 – 2019) of 5.6 million Mt to a surplus of c.6 million Mt
- ✓ 11 million Mt new capacity additions 2022 – 2026 includes 3.6 million Mt of capacity in Russia which is at risk of delays
- ✓ Increased focus on the environment is a barrier to enter this industry, limiting “grey” capacity additions in the US, EU, China and elsewhere
- ✓ Good visibility on supply additions given 4-6 years lead time to build a new plant

## Merchant ammonia market structurally tightening

Global ammonia net capacity additions and demand growth, ex-China ex-urea, Mt

- ✓ Given high feedstock costs and gas supply availability concerns in Europe, 7Mt of ammonia capacity is currently shut, with more expected as gas in Europe expected to remain tight, upside for ammonia imports in Europe and pricing
- ✓ Structural tightening in ammonia with limited net capacity additions more than offset by higher demand growth, resulting in a supply deficit of 4 million Mt compared to a net surplus of 7.5 million Mt in 2015 – 2019, providing a strong market backdrop for forward ammonia pricing above high marginal cost floors
- ✓ Further upside for ammonia from the expected incremental demand for clean ammonia in new applications across a range of sectors including marine fuel and power, and as a hydrogen carrier

# Lower Chinese Exports And Robust Indian Imports Supportive Of Nitrogen Prices

- Chinese market balances supported by:

- Government measures to curb exports until at least H2 2023 and prioritise domestic supply including mandatory stocking requirements. This is expected to cap 2022 exports to ~ 1.5 Mt
- High domestic crop prices and government emphasizing food security is supportive of crop expansion and robust fertilizer demand in 2022 and 2023
- Capacity closures due to environmental regulations contributing to lower exports in 2022 and beyond
- Medium-term exports expected to fall to ~3 mt over the medium-term given environmental policy impacts and prioritization of energy for domestic use

## Chinese Exports Curtailed on Domestic Demand and Closures

China urea exports, Mt

- Despite the commissioning of three world-scale plants in India over 2017-2021, domestic production has been relatively flat and decreased c.600 kt in 2021
- Capacity additions in India are subject to delays and not expected to commission in line with published government timelines, supporting imports.
- Short-term, India is expected to issue follow-up tenders to replenish inventories, ahead of Rabi season starting in October. High wheat prices, demand for Indian wheat given Russia-Ukraine conflict and good monsoons, will be supportive of urea demand through H2 2022.
- Further upside for Indian import demand in 2023 given growth in crop area and subsidies favoring urea expected to result in increased substitution from P&K

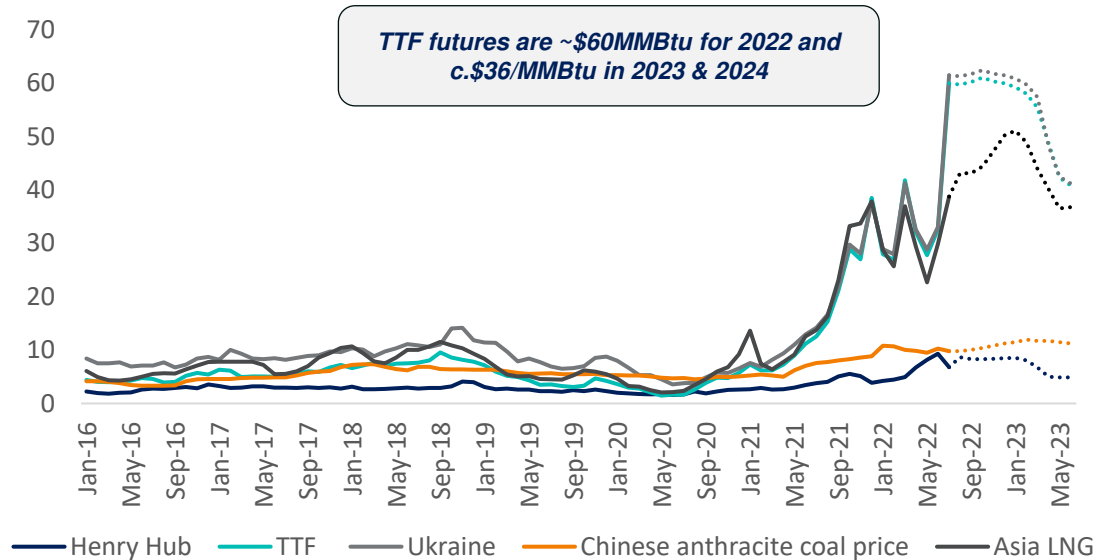

## Indian Supply Has Remained Flat Despite New Capacity Commissioning and Robust Demand Supportive of Imports

India imports, Mt

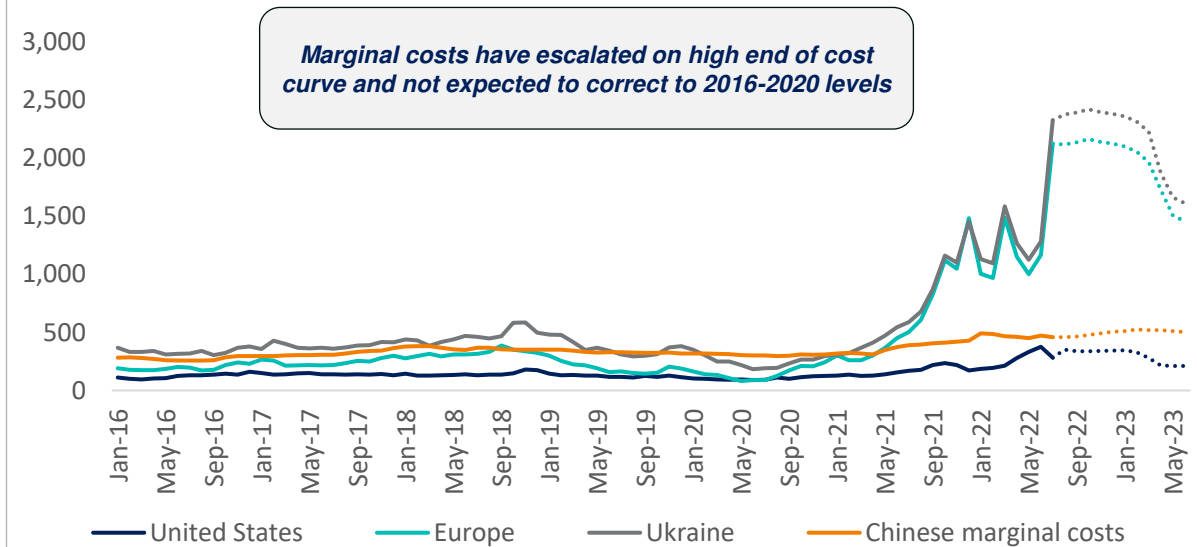

# Higher Costs for Marginal Producers Supportive of Nitrogen Prices

Global Feedstock Prices 2017-2022F, \$/MMBtu

Cash Costs per ton of Ammonia 2017-2022F, \$/t

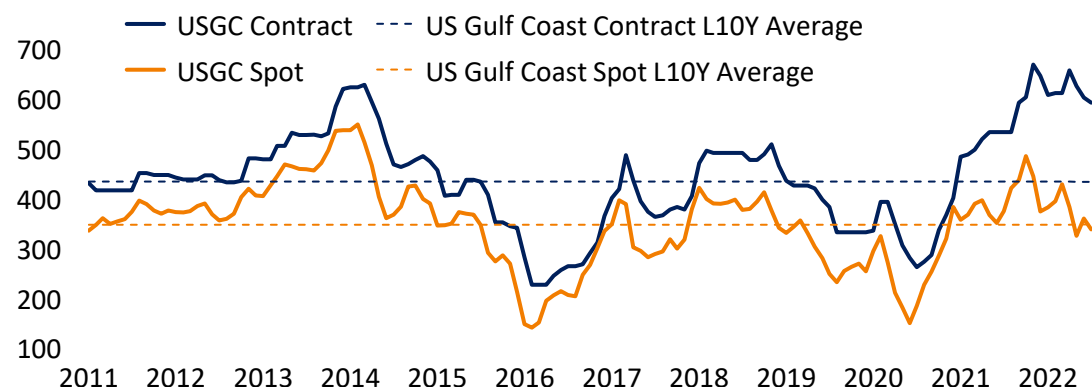

- Surge in gas prices has been driven by limited Russian gas flows, lower than average storage levels in Europe and higher global demand for gas resulting in highly volatile gas markets
  - ✓ TTF futures point towards gas prices of c.\$60/MMBtu for the rest of 2022 and \$36/MMBtu in 2023/2024, compared to \$5/MMBtu in 2015 – 2019
  - ✓ Gas prices are expected to remain volatile and significant upwards pressure expected given risks around Russian gas and coal flows into Europe, reduced US LNG exports in the short-term and tight coal and power markets
  - ✓ Europe is now the marginal producer for nitrogen and at current forward gas prices, marginal variable ammonia costs excluding CO<sub>2</sub> are above \$2,000/t for H2 2022 and \$1,300/t for 2023/2024. 19 Mt of European ammonia capacity, 10 Mt of urea and 34 Mt of nitrates capacity at risk of being permanently shut if pricing remains below costs for a sustained period
- Higher marginal costs have steepened the global cost curves and provide support for nitrogen and methanol pricing into 2023 and beyond

# Methanol Market Fundamentals Are Supportive, with Significant Long-term Upside

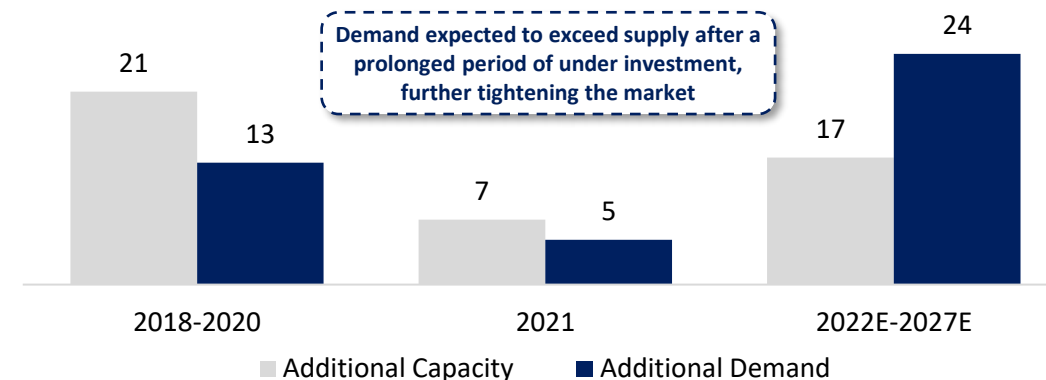

## Methanol spot and contract prices

Methanol contract and spot US prices, USD per metric ton

## Methanol supply & demand balance tightening

Methanol capacity vs. demand growth, Million Mt

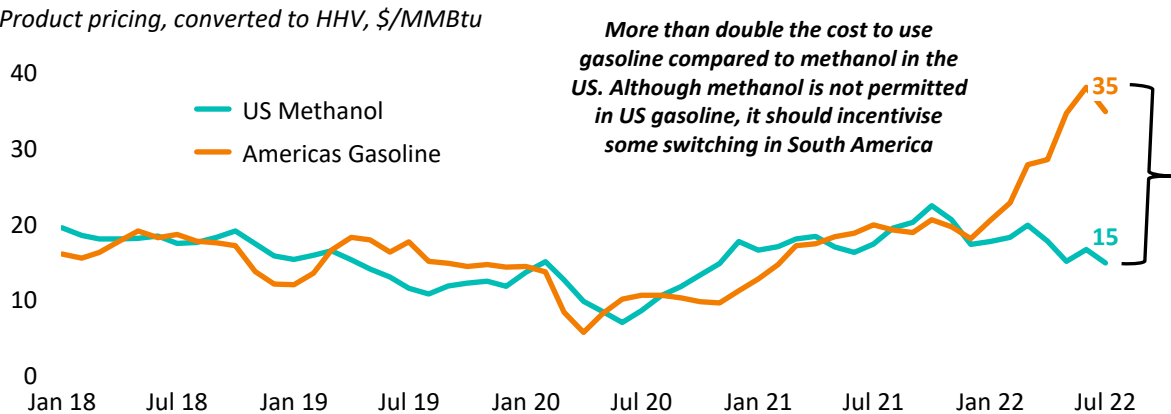

- **Methanol market fundamentals remain healthy**, with strong downstream demand from a diversified customer base and high crude and coal providing price floor support
  - In the US, the contract price for August 2022 settled at \$592/t from \$597/t in July 2022 and spot pricing in the US has been further supported by unplanned outages
  - Operating rates for major derivatives segments (formaldehyde, acetic acid, MMA) are reported to be at healthy rates in the US and Europe
- **Near to medium term demand growth:** Fuel consumption in China picking up with higher oil prices supportive of methanol substitution for other fuels, traditional demand remaining firm, and MTO economics stemming from high energy and olefins prices in China supporting MTO operating rates above 80%. Downside risks being monitored given the volatile macro economic environment and consequent impact on industrial production, but this should be partially offset by higher demand for gasoline blending
- **Strong visibility on medium term pricing environment** with incremental demand expected to exceed new supply by ~7mtpa through 2027
- **Robust long term demand growth for methanol** from driven by growth in existing applications, with **significant upside demand potential** from the hydrogen transition, notably for road and marine fuels application

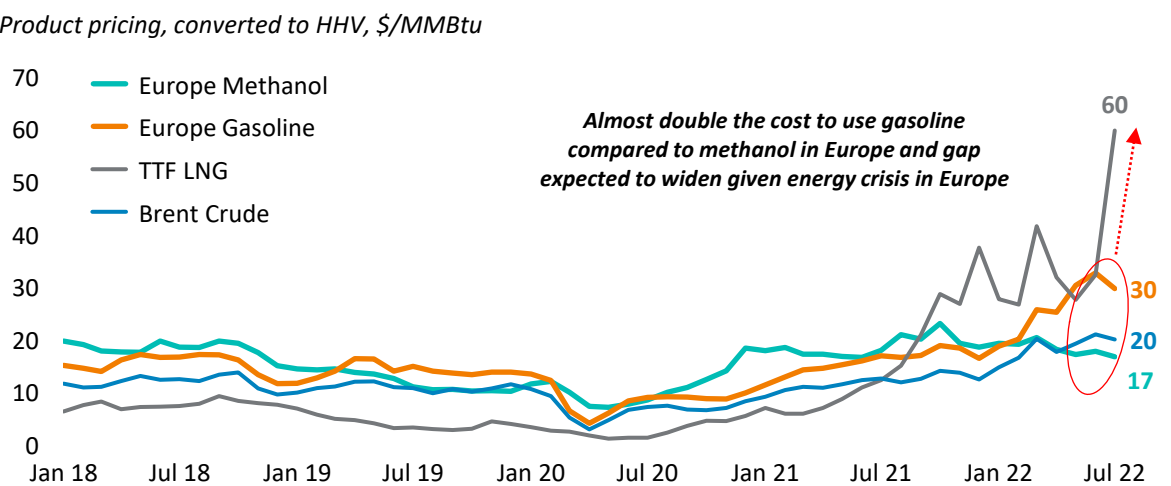

# Methanol Uniquely Positioned as Alternative Fuel in Energy Mix

- Methanol is positioned as an economically advantageous fuel compared to alternatives
  - ✓ **Crude oil futures point towards oil prices of \$90+/bbl** for 2023 and oil pricing is expected to remain volatile, supporting methanol into gasoline blending
  - ✓ **High LNG prices** support utilization of methanol for fuel and energy applications. For example, many new boilers in China are designed to consume methanol instead of coal or natural gas. Similar uptake of methanol should happen in Europe, as methanol is half the cost of gasoline and differentials expected to widen given the EU energy crisis.
  - ✓ Methanol burns more cleanly as a fuel and has low SOx emissions paving the way for low carbon methanol uptake and this provides additional opportunities for OCI as a global leader in bio-methanol production

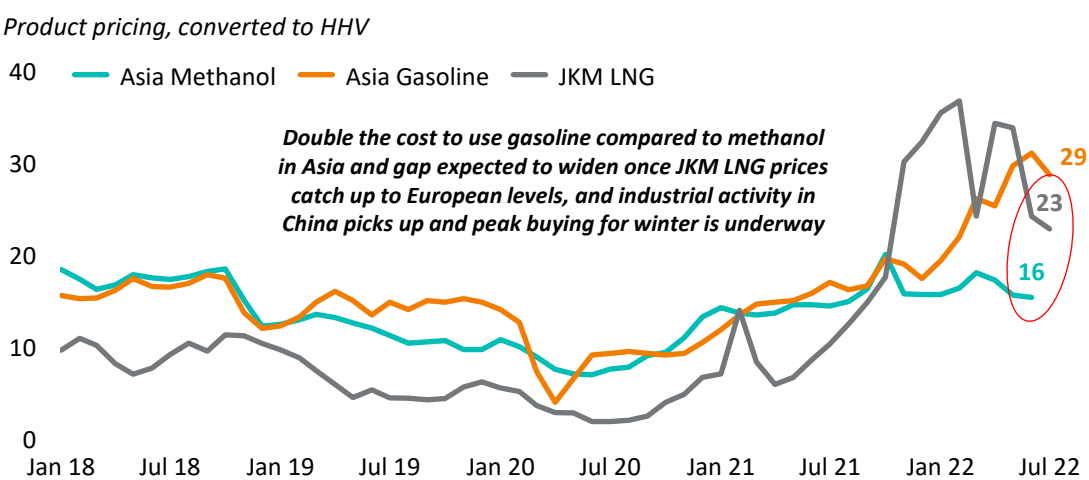

## Gasoline Blending Supported in the United States

## Fuel Use and Gasoline Blending Supported in Europe

## Energy and Gasoline Applications supported in Asia

# Table of Contents

Market Outlook

---

**Capitalizing on the  
Hydrogen  
Opportunity**

---

Appendix

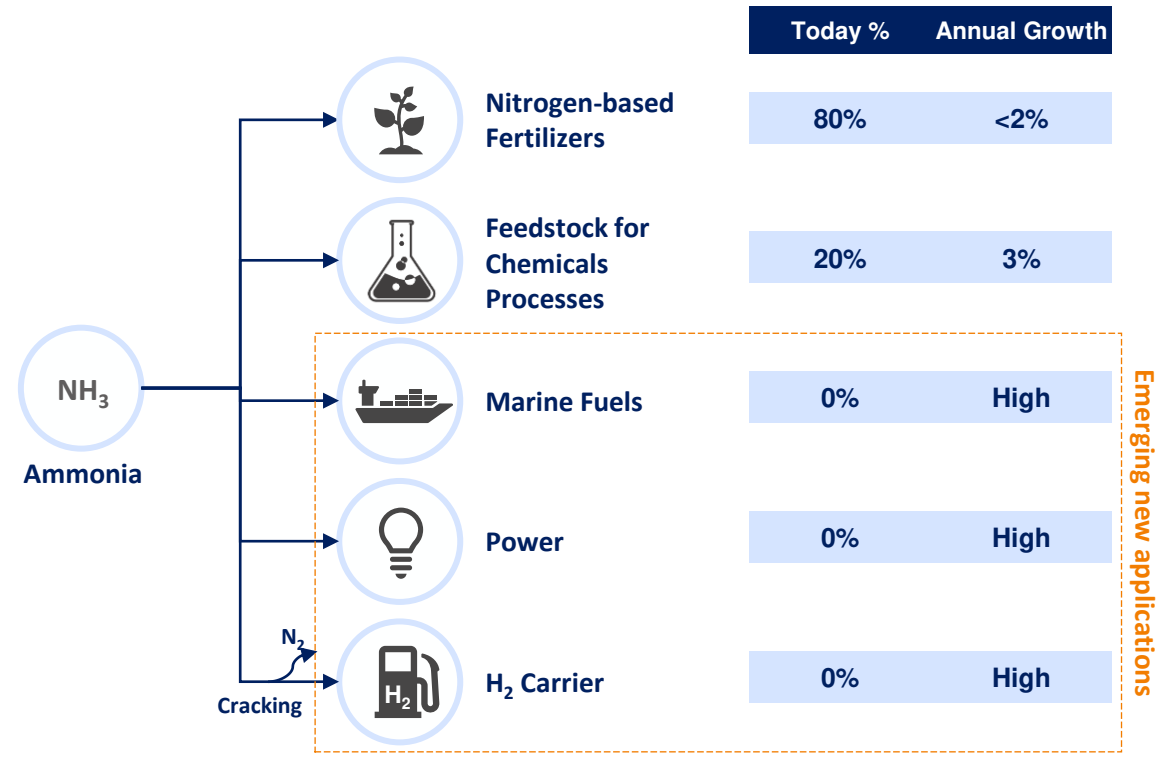

# Significant Incremental Ammonia Demand From New Clean Energy Applications

Clean Hydrogen is strongly positioned to lead the world’s energy transition, and ammonia is the key enabler

- Clean hydrogen use in energy applications will be a major contributor to emission reduction across industries where abatement is difficult (e.g. power and shipping)
- **Ammonia is one of the most efficient ways to transport and store clean hydrogen**, as hydrogen is difficult to store and transport due to low boiling temperature (-252 C)
- On the back of this transition, **several new applications are emerging** which individually would create an end market multiple times as large as the current ammonia merchant
- Incremental demand for clean ammonia is expected to tighten the conventional market further as grey capacity is decarbonized to cater to the new clean ammonia demand

## Blue/Green Ammonia to Make Up ~50% of Merchant Market vs Zero Today

Incremental blue / green ammonia demand, Mt

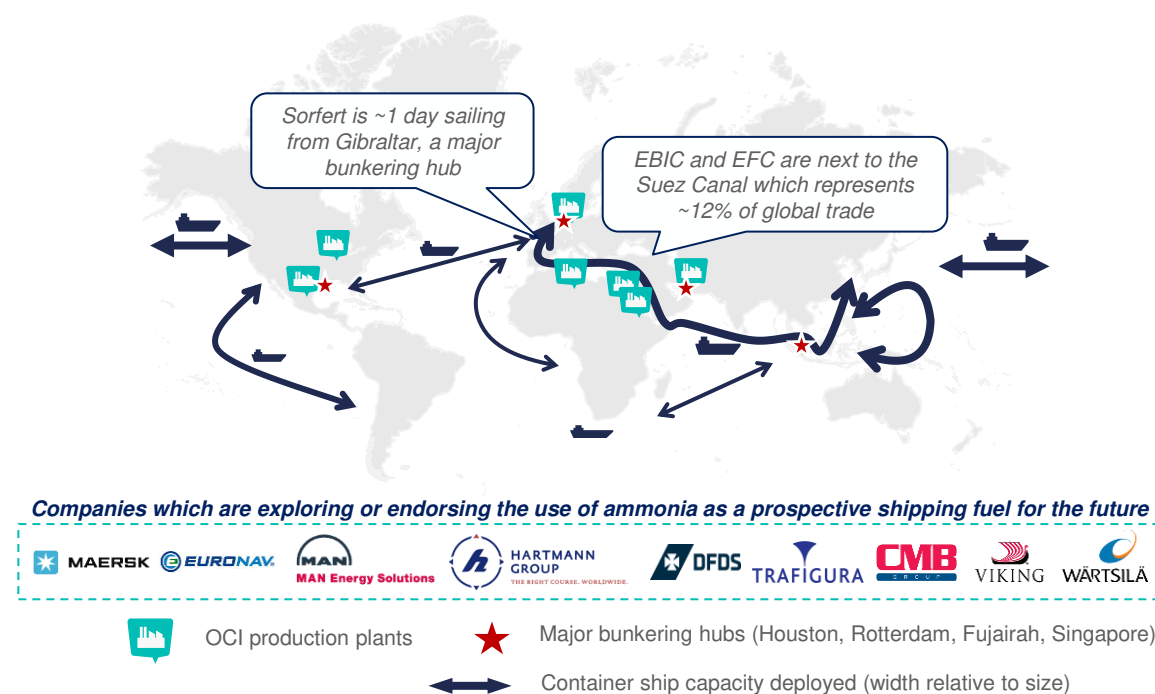

# Marine fuel represents a substantial market opportunity for OCI

- Ammonia and methanol are the only practical alternatives for long-distance shipping, even without decarbonization technologies, since they have a lower environmental footprint than HFO
  - Ammonia burns cleanest when used as energy source vs other fuels, therefore using blue ammonia in a ship would potentially result in >50% GHG reduction
- Maritime HFO fuel demand is expected to grow to ~430 Mt by 2050, translating in ammonia and methanol equivalents of 650 - 900 Mt while the current combined global production is ~290 Mt
- The existing footprint creates **strategic potential for bunkering stations stopovers, with limited investment** for ammonia and methanol-fueled ship engines
- Major ship owners, engine manufacturers and ports, are all endorsing the use of ammonia and methanol as the shipping fuel of the future

2050 Outlook potential for Ammonia and Methanol in the Marine Fuels Industry as a substitute for HFO, Mt<sup>1,2</sup>

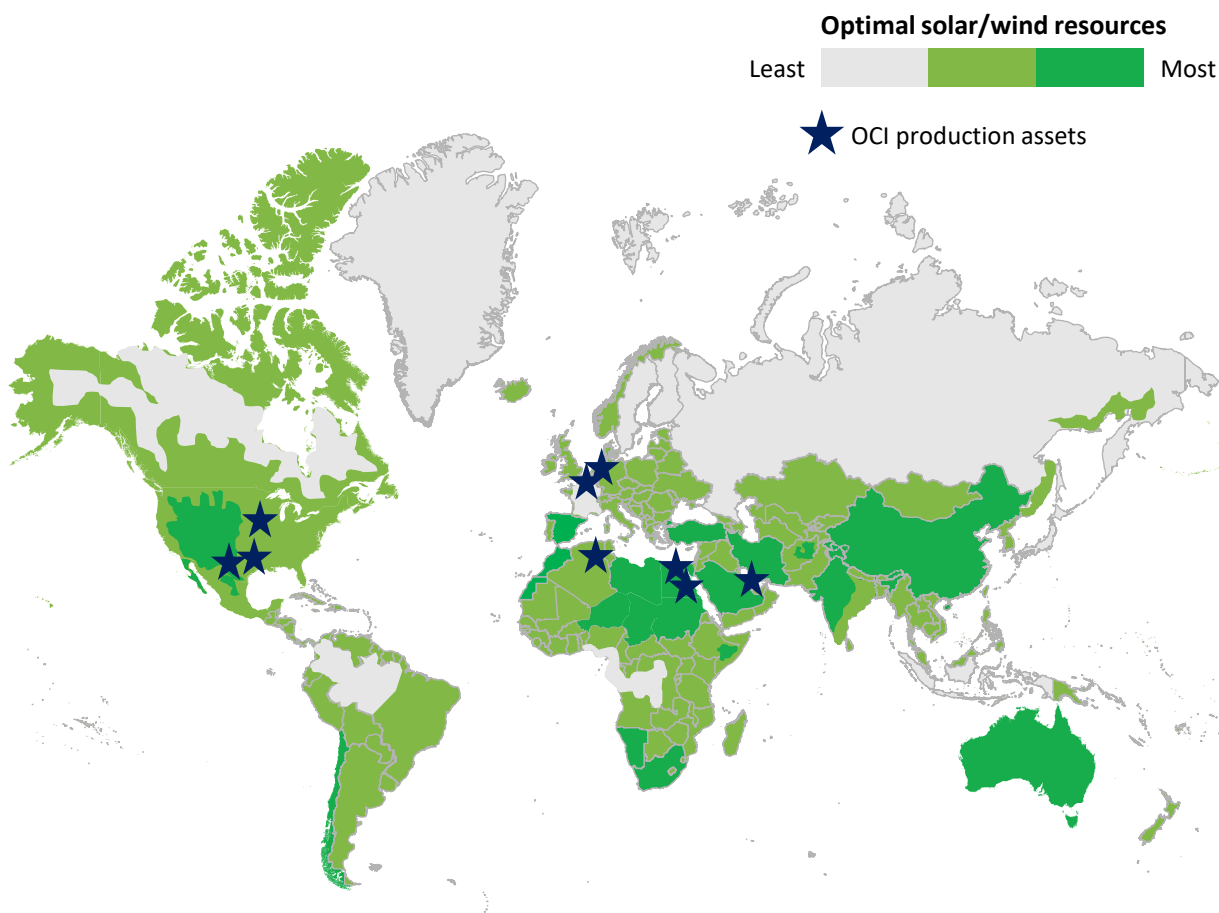

OCI's Network Located at Key Bunkering Hubs on Major Shipping Lanes

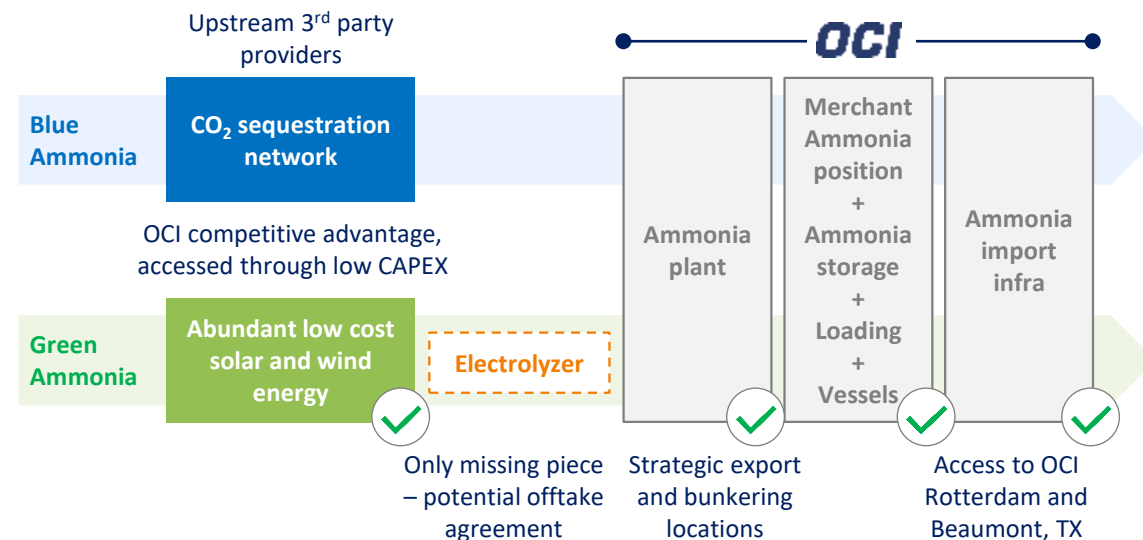

# OCI is Very Well Positioned to Capture the Hydrogen Potential

## Located in Proximity to Renewable Energy Sources and Shipping Hubs

Plants with ample access to low cost solar and wind sources and located on the busiest shipping lanes in the world

## Asset Base with Existing Access to the Entire Hydrogen Supply Chain

- OCI is evaluating and developing a number of lower carbon projects across its global asset base
- OCI is a plug-and-play for low carbon ammonia, with significant competitive advantages in comparison to other greenfield projects
- Ready to benefit from blue and green ammonia opportunities with practically all critical necessary pieces in place
- Can use electrolyzers incrementally with variable output to ammonia synthesis in line with typical renewable feedstocks

Minimal capex required to add green/blue hydrogen capacity compared to greenfield projects

## Appendix

*OCI: Structurally higher netbacks and profit optimization*

# Structurally Higher Realised Netbacks in OCI

Low-freight Costs, Duty-free Access, Direct-to-customer Strategy and Inland Distribution in US and Europe Enables Structural Netback Advantages

Structural advantage supplemented by strong in-house capabilities and trading platform

- ✓ Low-freight costs, duty-free access to key importing markets and direct-to-customer strategy
- ✓ Advantage compared to peers even if duties to Europe are removed given freight and business model advantage
- ✓ **Extensive inland storage and distribution infrastructure** in the US with N-7 JV and in Europe
- ✓ OCI as both the **producer and the trader** always targets value creation
- ✓ Ability to **generate strong trading margins** and move third party product
- ✓ Flexible approach to allocate volumes to the **highest netback markets**
- ✓ **Diversified customer base, distribution reach in 50+ countries** with established logistics for export at each site with extensive storage capacity
- ✓ **Footprint expansion** in the US, Europe, Latin America and Asia

Source: CRU, Company Information. Notes: (1) OCI illustrative realized price differential vs. peers in key exports markets (as of 2021 including Duties, Freight rates, Suez Canal fees and trader margin). Illustrative netback premiums compared to typical Russian and Middle East producers for all markets. Premium ranging from second closest exporters to widest gap. (2) Premium calculated based on Gulf versus Midwest pricing for ammonia, urea and UAN benchmark pricing in 2021

# Flexible production capabilities to maximize returns

Max. Proven Capacities <sup>1</sup> (‘000 metric tons)												
Plant	Country	Ammonia (Gross)	Ammonia (Net) <sup>3</sup>	Urea	UAN	CAN	Total			Total		Total <sup>2</sup>
							Fertilizer	Melamine <sup>4</sup>	DEF	Nitrogen	Methanol	
Iowa Fertilizer Company <sup>5</sup>	USA	926	195	438	1,832	-	2,465	-	1,019	3,484	-	3,484
OCI Nitrogen <sup>5</sup>	Netherlands	1,196	350	-	730	1,560	2,640	219	-	2,859	-	2,859

Egypt Basic Industries Corp.	Egypt	748	748	—	-	-	748	-	—	748	-	748
Sorfert Algérie	Algeria	1,606	803	1,259	-	-	2,062	-	—	2,062	-	2,062
Fertil	UAE	1,205	—	2,100	-	-	2,100	-	100	2,200	-	2,200
OCI Beaumont	USA	365	356	-	-	-	356	-	-	356	1,004	1,360
BioMCN	Netherlands	-	-	-	-	-	-	-	-	-	991	991
Natgasoline LLC	USA	-	-	-	-	-	-	-	-	-	1,807	1,807
<b>Total MPC</b>		<b>6,922</b>	<b>2,452</b>	<b>5,511</b>	<b>2,562</b>	<b>1,560</b>	<b>12,085</b>	<b>219</b>	<b>1,469</b>	<b>13,773</b>	<b>3,802</b>	<b>17,575</b>
Excluding 50% of Natgasoline		-	-	-	-	-	-	-	-	-	(904)	(904)
<b>Total MPC with 50% of Natgasoline</b>		<b>6,922</b>	<b>2,452</b>	<b>5,511</b>	<b>2,562</b>	<b>1,560</b>	<b>12,085</b>	<b>219</b>	<b>1,469</b>	<b>13,773</b>	<b>2,898</b>	<b>16,671</b>

<sup>1</sup> Capacities are maximum proven capacities (MPC) per line at 365 days. OCI Beaumont's capacity addition is an estimate of 2,853 tpd x 365 and BioMCN's M2 capacity is an estimate based on 1,250 tpd x 365 days; <sup>2</sup> Total capacity is not adjusted for OCI's ownership stakes or downstream product mix limitations (see below), except OCI's 50% stake in Natgasoline; <sup>3</sup> Net ammonia is estimated sellable capacity based on a certain product mix; <sup>4</sup> Melamine capacity split as 164 ktpa in Geleen and 55 ktpa in China. OCI Nitrogen owns 49% of a Chinese melamine producer, and exclusive right to off-take 90%; <sup>5</sup> OCI Nitrogen and IFCo each cannot achieve all downstream production simultaneously (i.e.: OCI Nitrogen cannot maximize production of UAN, CAN and melamine simultaneously, and IFCo cannot maximize production of UAN, urea and DEF simultaneously)
